Bobsleigh is a game in Olympic winter that player will run a sleigh goes downhill with extremely high speed. It can be played as a team of two, four, five, or individually. The data that I analyze is to compare the medals of USA earned with other countries. This will be a bar chart of the USA with their medals and compare with all countries added together to see how the USA dominates the world in Bobsleigh. And it will also be a chart that shows what two other countries has the ability to compete with each other.

I will filter the data of all bobsleigh medals first, then filter the USA's medals and other countries' medals separately. Then I should go over the other two countries that have the ability to compete with each other, and compare how they did it.
